REMINDER: PLEASE VOTE IN THE 2016 DPS ELECTION

DEADLINE FAST APPROACHING: ONLY ONE DAY LEFT!

The 2016 election for DPS Vice-Chair and Committee is now open, and will close on July 31st 2016.

Please remember to vote! Your colleagues on this year's ballot would greatly appreciate all DPS members taking the time to vote in this year's election.

Thank you to those that have already voted.

Go to <https://aas.org/vote/> [1]

You will need your AAS member login ID (which defaults to your membership number), and your password.

If you have trouble voting on line, the AAS can do a proxy vote and vote on your behalf (send an e-mail to dpssec@aas.org [2]). You will still get an automated email confirmation and a separate manual email, both with who you voted for and a confirmation number.

You should vote for one of the two candidates for Vice-Chair:

- o Catherine Olkin, Southwest Research Institute
- o Harold Reitsema, Retired

The elected Vice-Chair will take his/her functions in October 2016 and will become the DPS Chair in October 2017.

You should also vote for two of the five candidates for DPS Committee:

- o Ashley Davies, Jet Propulsion Laboratory
- o Karl Hibbitts, The Johns Hopkins University Applied Physics Laboratory
- o Catherine Neish, University of Western Ontario
- o Britney Schmidt, Georgia Institute of Technology
- o Maria Womack, University of South Florida

The successful candidates will serve on the Committee for three years after October 2016.

The detailed vitae and position statements for each of the candidates is linked from the main election page,

<https://aas.org/vote/> [1]

It is very important for all DPS Members to participate to these elections, so please take a moment to vote!

Thank you!

REMINDER: REGULAR REGISTRATION DEADLINE FOR DPS 48/EPSC 11

The Regular Registration Deadline is Friday, August 12, 2016.

Full Registration for Full DPS Members increases from \$622 to \$719 if you register after August 12.

Pasadena, CA, 16-21 October 2016 at the Pasadena Convention Center

<https://aas.org/meetings/dps48> [3]

* Important dates

12 August 2016 DPS 48/ EPSC 11 Regular Registration Deadline

<https://aas.org/meetings/dps48/registration> [4]

And also:

- 2 August 2016: Late Abstract Submission Deadline - 9:00pm ET
- 14 September 2016: Hotel Reservations Deadline
- 16 September 2016: Dependent Care Grant Application Deadline

The DPS is grateful to our Meeting Sponsors:

AURA

Southwest Research Institute
Ball Aerospace

Nature Geoscience

Space Science Institute

The University of Arizona Press

Universities Space Research Association (USRA)

VORTICES

3-----3-----3-----3-----3-----3-----3-----3-----3-----3

JOB, POSITIONS, OPPORTUNITIES

A) TWO POSTDOCTORAL POSITIONS IN MODELING
AND OBSERVATION OF EXOPLANET ATMOSPHERES

Bordeaux Laboratory for Astrophysics
University of Bordeaux
Bordeaux, France

UPCOMING MEETINGS

A) AGU 2016 SESSION P004: COMETARY PROCESSES
IN THE LIGHT OF ROSETTA

Conveners: Bonnie Buratti, Mathieu Choukroun, Matt Taylor, and Nicolas Altobelli

The European Space Agency's Rosetta spacecraft will make an unprecedented
controlled crash onto comet 67P/Churyumov-Gerasimenko in late September

2016, providing close scrutiny of the comet until the very end. This session will

focus on scientific results from this final stage of Rosetta's life. The session will also include correlative studies among instruments from all phases of the mission; studies that incorporate ground-based observations for better temporal coverage and perspective; theoretical modeling of cometary processes; and interrelationships among comets and other small bodies.

AGU abstracts are due no later than 3 August.

B) AGU SESSION P026 SOLAR SYSTEM SMALL BODIES:

RELICS OF FORMATION AND NEW WORLDS TO EXPLORE

We would like to invite you to submit an abstract to our session entitled "Solar System Small Bodies: Relics of Formation and New Worlds to Explore" scheduled at the AGU Fall Meeting at San Francisco, December 12-16 2016.

Abstract deadline: 3 August 23:59 EDT/03:59 +1 GMT.

<https://agu.confex.com/agu/fm16/preliminaryview.cgi/Session13304> [6]

The composition and physical properties of Small Solar System Bodies (SSSBs), remnants of the formation of planets, are key to better understand our solar system. Increased knowledge of their surface properties and their potential as resources are also necessary to prepare for robotic and human exploration. Hints about the internal structure and composition of SSSBs have been acquired recently thanks to flyby/rendezvous data from space missions, study of complex multiple asteroid systems, or close encounter between asteroids. This session welcomes abstracts on the results bringing information on the internal structure and composition of SSSBs based on space and ground-based data, numerical models, as well as instrument/mission

concepts in the prospect of future exploration.

Conveners:

Franck Marchis (SETI Institute & Iris AO), Julie C. Castillo (NASA Jet Propulsion Laboratory) and Padma A Yanamandra-Fisher (Space Science Institute)

C) AGU SESSION P006: DETECTION AND DIRECT IMAGING OF
HABITABLE EXOPLANETS: PROGRESS AND FUTURE

We would like to invite you to submit an abstract to our session entitled
“Detection And Direct Imaging Of Habitable Exoplanets: Progress And Future”
scheduled at the AGU Fall Meeting at San Francisco, December 12-16 2016.

Abstract deadline: 3 August 23:59 EDT/03:59 +1 GMT.

<https://agu.confex.com/agu/fm16/preliminaryview.cgi/Session13664> [7]

This session consists in a discussion on the potential of new and future facilities and modeling efforts designed to detect, image and characterize habitable exoplanets, studying their formation, evolution and also the existence of possible biospheres. Topics to be covered in this session include signs of exoplanet habitability and global biosignatures that can be sought with upcoming instrumentation; instrument requirements and technologies to detect these markers; strategies for target selection and prioritization; and impacts of planetary system properties, ground-based and space telescope architectures, and impacts of instrument capabilities on the yield of potentially inhabited exoplanets.

Conveners: Franck Marchis (SETI Institute), Ramses M. Ramirez (Cornell University), Douglas Caldwell (SETI Institute)
